

# Obtaining $r_0$ parameters for HF calculations of alpha's from odd-A and odd-odd nuclei

Yurdanur Akovali

Oak Ridge National Laboratory

In order to calculate hindrance factors for alpha's from an odd-A and from an odd-odd nucleus, **the alpha-hindrance factors program requires a  $r_0$  parameter as an input.** These parameters are chosen from the  $r_0$  values calculated for the **even-even nuclei** (see Y.A.Akovali, Nucl.Data Sheets 84,1 (1998)).

$r_o$  parameters calculated from  $\alpha$  decays of even-even

**(1) For an even Z, odd N nucleus,  
the  $r_0$  parameters may be chosen as the  
average of the neighboring N-1 and N+1  
isotopes:**

$$r_0(\text{even } Z, \text{odd } N)$$

$$= \frac{1}{2} [r_0(Z, N-1) + r_0(Z, N+1)]$$

example:

ORNL-DWG 96M-6983A

o  $r_o$  parameters for odd-mass Rn ( $Z=86$ ) isotopes

**Even Z, Odd N: e.g.,  $^{183}\text{Pt}$**

$^{182}\text{Pt}^{104}$ $Z=78$ 	$^{183}\text{Pt}^{105}$ $Z=78$	$^{184}\text{Pt}^{106}$ $Z=78$ 	$^{185}\text{Pt}^{107}$ $Z=78$	$^{185}\text{Pt}^{108}$ $Z=78$
$^{182}\text{Au}^{103}$ $Z=79$	$^{183}\text{Au}^{104}$ $Z=79$	$^{184}\text{Au}^{105}$ $Z=79$	$^{185}\text{Au}^{106}$ $Z=79$	$^{186}\text{Au}^{107}$ $Z=79$
$^{182}\text{Hg}^{102}$ $Z=80$	$^{183}\text{Hg}^{103}$ $Z=80$	$^{184}\text{Hg}^{104}$ $Z=80$	$^{185}\text{Hg}^{105}$ $Z=80$	$^{186}\text{Hg}^{106}$ $Z=80$

 Nearest even-even neighbors

Constant Z; interpolate N

$1/2[r_0(Z, N-1) + r_0(Z, N+1)] - \text{TOI}$  () and ORNL ()

**(2) For odd Z nuclei, the  $r_0$  plots are chosen to be in between the  $r_0$  curves for the neighboring even-even nuclei. The  $r_0$ 's for odd Z, even N then is the average of  $r_0$ 's for Z+1 and Z-1 isotones:**

$$r_0(\text{odd Z, even N})$$

$$= \frac{1}{2} [r_0(Z+1, N) + r_0(Z-1, N)]$$

•  $r_o$  parameters for odd  $Z$ , even  $N$  At isotopes

**Odd Z, Even N: e.g.,  $^{183}\text{Au}$**

$^{182}\text{Pt}^{104}$ $Z=78$  	$^{183}\text{Pt}^{105}$ $Z=78$	$^{184}\text{Pt}^{106}$ $Z=78$ 	$^{185}\text{Pt}^{107}$ $Z=78$	$^{185}\text{Pt}^{108}$ $Z=78$
$^{182}\text{Au}^{103}$ $Z=79$		$^{184}\text{Au}^{105}$ $Z=79$	$^{185}\text{Au}^{106}$ $Z=79$	$^{186}\text{Au}^{107}$ $Z=79$
$^{182}\text{Hg}^{102}$ $Z=80$ 	$^{183}\text{Hg}^{103}$ $Z=80$	$^{184}\text{Hg}^{104}$ $Z=80$  	$^{185}\text{Hg}^{105}$ $Z=80$	$^{186}\text{Hg}^{106}$ $Z=80$

 Nearest even-even neighbors if A constant for each column

 ORNL: Constant N, interpolate Z:

$$1/2[r_0(Z-1,N)+r_0(Z+1,N)]$$

 TOI: use 4 nearest neighbors (interpolate Z and N):

$$1/4[r_0(Z-1,N)+r_0(Z-1,N+2)+r_0(Z+1,N-2)+r_0(Z+1,N)]$$

$$=1/2[r_0(Z-1,N+1)+r_0(Z+1,N-1)]$$

**(3) For odd Z-odd N nuclei, the  $r_0$  curves for the odd Z nuclei described in above are used. As it is done for even-even nuclei,  $r_0$ 's for the odd N nuclei are the average of  $r_0$ 's for the adjacent even N nuclei with the same Z number:**

$$r_0(\text{odd Z, odd N})$$

$$= \frac{1}{2} [r_0(Z, N+1) + r_0(Z, N-1)]$$

**This is equivalent to averaging four  $r_0$ 's of adjacent even-even nuclei.**

$$r_0(\text{odd Z, odd N})$$

$$= \frac{1}{4} \{r_0(Z+1, N+1) + r_0(Z+1, N-1) + r_0(Z-1, N+1) + r_0(Z-1, N-1)\}$$

example:

ORNL-DWG 96M-6983A

⊙  $r_o$  parameters for odd-odd At isotopes

**Odd Z, Odd N: e.g.,  $^{184}\text{Au}$**

$^{182}\text{Pt}^{104}$ $Z=78$ 	$^{183}\text{Pt}^{105}$ $Z=78$	$^{184}\text{Pt}^{106}$ $Z=78$  	$^{185}\text{Pt}^{107}$ $Z=78$	$^{185}\text{Pt}^{108}$ $Z=78$
$^{182}\text{Au}^{103}$ $Z=79$	$^{183}\text{Au}^{104}$ $Z=79$		$^{185}\text{Au}^{106}$ $Z=79$	$^{186}\text{Au}^{107}$ $Z=79$
$^{182}\text{Hg}^{102}$ $Z=80$	$^{183}\text{Hg}^{103}$ $Z=80$	$^{184}\text{Hg}^{104}$ $Z=80$  	$^{185}\text{Hg}^{105}$ $Z=80$	$^{186}\text{Hg}^{106}$ $Z=80$ 

 Nearest even-even neighbors if A constant for each column

 ORNL: Interpolate N, interpolate Z:

$$1/2[r_0(Z, N+1) + r_0(Z, N-1)]$$

$$= 1/4[r_0(Z-1, N+1) + r_0(Z-1, N-1) + r_0(Z+1, N+1) + r_0(Z+1, N-1)]$$

 TOL: Interpolate N, interpolate Z (use 2 nearest neighbors):

$$1/2[r_0(Z-1, N+1) + r_0(Z+1, N-1)]$$

The evaluators must use their judgments, and may exclude any of the  $r_0$ 's for the adjacent even-even nuclei in these averaging, depending on their accuracies, preciseness, and fit to systematic trend.
